College of sustainable agriculture

Overview:

Seize the opportunity to see the seeds of a better world and reshape the future of agriculture and emphasize the global issues. As well as demonstrating knowledge and skills to improve agriculture productivity, competitiveness and sustainability of different crops like wheat, fruit and vegetables along with animal welfare. The labor market is in an urgent need for agricultural specialists who are capable of offering sustainable solutions for food security and climate change. You will be qualified in managing to find a balance between agriculture resources and ecosystem. This program provides a great opportunity for you to pursue a rigorous program of studying sustainable agriculture and learning from experts who have significant contribution in this sector. This will allow you to apply critical thinking skills to current and future issues in agriculture and utilize economic theories and quantitative techniques regarding food security, farm management and agribusiness and desert reclamation. Your courses will be about agronomy, Horticulture, Animal welfare, Agro ecology and agricultural technology. All of these will be a great benefit in your training course which will last for 60 hours and in your research project to understand the basics of the concepts with hands-on practice to enable you to be ready for employment and allowing you to develop your skills in finding methods to solve problems within the agriculture sectors.
